

BAYVIEW

A POINT OF VIEW

Construction Connection – Week of Feb 6 2017

- **Level 1 / First Floor (west):** Rebuild continues, with sheetrock and “mudding” of new walls. ***Air ventilation will be in effect to control odors.***
- **Level 2 (ALU):** Work will continue in the south central area and north east corner.
- **Levels 3-9:** Framing, drywall and electrical work will continue. Case work and installation of cabinets will begin in the common areas opposite the elevator, and the “game nooks”.
- **Levels 4-5:** Overhead corridor work continues with patching and painting.
- **Main Kitchen:** Tuesday evening (7:30-9:00) there will be some re-piping work. This should not impact residents.

DURING THE WEEK

- Electrical rooms (former floor storage rooms) on several floors will have their concrete flooring X-rayed to determine where to run the electrical conduits.
- Concrete pouring continues for the shear walls and footings in the basement level as part of the seismic upgrade.
- Expect continued noise due to demolition work outside the end of the north wing.

LOOKING FOR A QUIET SPOT?

The Hub/Reception area has some comfy seating available.
